#### **7.1.4-Relevant Information**

##### **Water conservation facilities available in the institution**

##### **Rain Water Harvesting**

The institution is located in the Rural area having Satpuda mountain ranges and known for acute water shortage. So, the college realizes the value of every drop of water and saves the rain water strategically for future use. Our college has rainwater harvesting mechanisms. The rainwater from mountains were collected through small reservoirs of rivers which is accumulated and deposited for reuse. The water collected through small concrete channels called as Nala buildings is directed benefit to open wells, bore-well and it can be used later. In spite of having maximum number of students, the institution does not face any water crisis even in the summer time. Although rainwater harvesting is gaining popularity as a sustainable water saving system in urban as well as rural areas, estimating required storage area for water remains an important design challenge and so our college has designed an effective plan by which we can collect rain water into a storage for campus and we are also making efforts to recharge the ground water.

##### **Distribution and Maintenance of Water bodies**

The Institution aims to provide the best services to the students in all the possible ways, in education facilities, in infrastructure and in basic necessities like water. The institution functions with the help of ground water. There are one bore wells with 550 feet respectively and with the Grampanchayat water which comes in every alternate day. The institution has a good storage of ground water, drinking water and water for cleaning purpose. 500 liters capacity underground tank is exclusively set for Fire-Safety and it gets filled with rain water. And for drinking purpose, the Institution has R.O purifier, which purifies and separates drinking water and waste water. That waste water is used for cleaning purpose. Floor is

equipped with Sintex and water coolers. Apart from the ground water and Grampanchayat water, the College has rain water harvesting pits, which function efficiently during rainy season

It is made mandatory to clean and disinfect water holding tanks at least monthly once or more often, if required. This is to remove algae (plant growth which produces bad tastes and odors), silt, and bacteria which may be harmful.

Water filters are replaced periodically to provide the students and staff with pure drinking water

No. of Bore wells	No. of Syntex	No of Tanks	No. of Water points	No. of Rain harvesting pits	Time intervals for cleaning the tanks	Maintenance Staff (In-house staff)
01	05	--	14	2	Twice in a Month and as and when required	Mr.Kailas. Mr Ravi
