NVDA Software:

Welcome to NVDA

☰

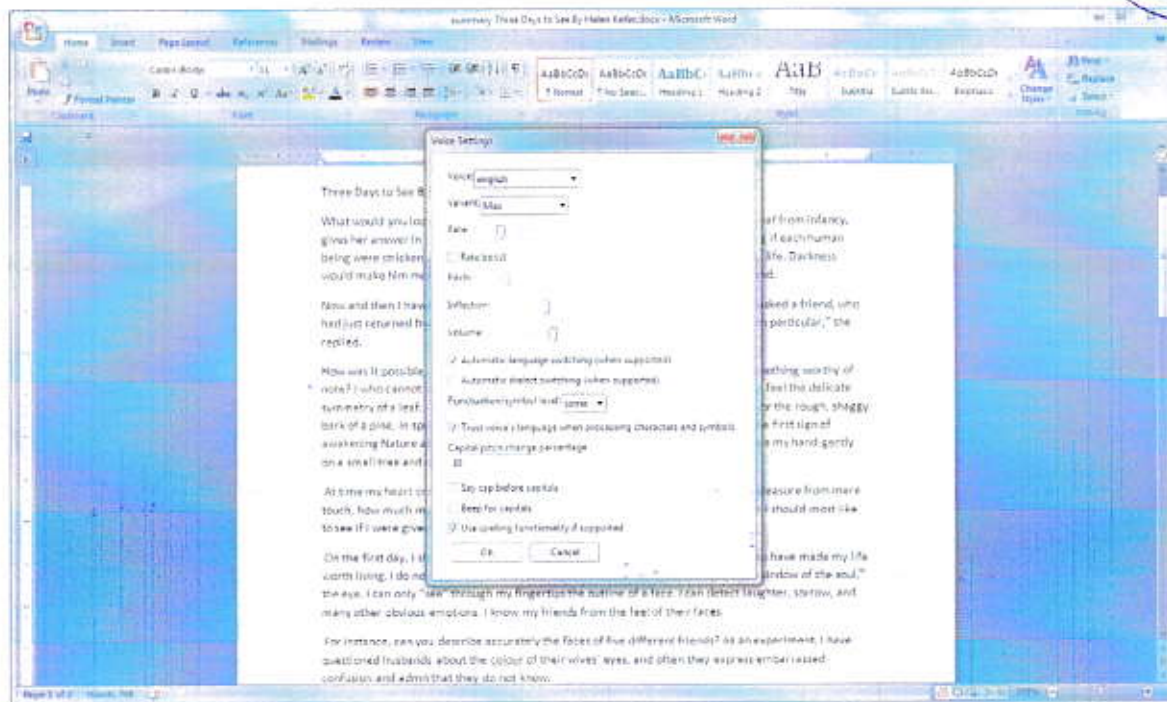

Welcome to NVDA!
Most commands for controlling NVDA require you to hold down the NVDA key while pressing other keys. By default, the numpad insert and main insert keys may both be used as the NVDA key. You can also configure NVDA to use the CapsLock as the NVDA key. Press NVDA+n at any time to activate the NVDA menu. From this menu, you can configure NVDA, get help and access other NVDA functions.

Options

- Use CapsLock as an NVDA modifier key
- Automatically start NVDA after I log on to Windows
- Show this dialog when NVDA starts

OK

Braille software:

A Braille embosser is an impact device that creates tactile dots on heavy paper, making written documents accessible to blind individuals. While there are several manufacturers of small desktop Braille embossers, Braillo focuses its efforts on making the highest quality production Braille embossers available.

Translation software for Braille embossers:

Transcribers and proofreaders work extremely hard to ensure that the file they're sending to the Braille embosser comes out correctly. The only way to properly ensure Braille translation comes from using a professional translation software, such as Duxbury or Braille2000. Braillo will gladly provide a list of recommended software programs.

Printing directly from your computer, phone or tablet without such software simply is not productive if the Braille output is incorrect, as there are too many variables (Grade 1 vs. Grade 2 vs. Grade 3, 6 dot vs. 8 dot, languages, punctuation, etc). Additionally, it would be unusual for a true Braille production center to print from a tablet or phone – instead, they're printing numerous work stations via a desktop/laptop computer and/or print server.
